Executive Summary

Product and platform leader with 15+ years of experience building, scaling, and modernizing digital products across high-usage native apps, digital commerce, self-service, marketplace platforms, and enterprise transformation across Charter Communications, Cox Communications, Cox Automotive, Equifax, Manheim, and Cox Enterprises. Career progression spans QA governance, business analysis, Agile project management, technical product ownership, and product leadership — a consistent thread of translating ambiguous customer, operational, and technology problems into scalable systems and measurable outcomes.

Currently leads digital product strategy through the Cox–Charter enterprise integration after helping transform Cox’s 5M+ MAU App ecosystem into a high-performing commerce and self-service platform, establishing the App as Cox’s leading digital sales channel at approximately 30% of total sales — recognized with a 2024 Winners Circle Award for digital revenue contribution and customer experience leadership. In parallel, founded and built Dugout Lineup, a mobile-first youth sports product, and champions practical AI-assisted product workflows that reduced research and documentation effort by more than 60%.

Strategic Leadership Experience

Lead Product Manager, Digital | Charter Communications | Atlanta, GA

2026–Present

Transitioned with the organization following the 2026 Cox–Charter corporate combination; continuing digital product leadership through enterprise integration.

- Lead product strategy through a complex enterprise integration spanning customer identity, authorization, digital self-service, cross-channel routing, analytics, notifications, commerce, and regulated customer experiences.
- Translate enterprise priorities, legacy-platform dependencies, customer needs, and technical constraints into product decisions, sequenced roadmaps, MVP definitions, measurable outcomes, and executive-ready recommendations.
- Shape reusable integration and experience patterns across native App, web, identity, account-management, and downstream Spectrum capabilities while preserving session context, customer permissions, analytics, and journey continuity.
- Shape platform decisions across SSO, role- and account-aware routing, authorization, eligibility, and deep linking while maintaining clear ownership boundaries across interconnected systems; define measurement frameworks across adoption, completion, containment, and platform performance.
- Drive alignment across Product, Engineering, UX, Analytics, Operations, Security, Marketing, and business stakeholders while separating launch-critical needs from longer-term platform investments.

Lead Product Manager, Digital | Cox Communications | Atlanta, GA

2022–2026

Owned product strategy, roadmap, discovery, and performance for Cox’s flagship Residential, Mobile, and Business App experiences serving more than 5M monthly active users, driving evolution toward a behavior-driven engagement and commerce platform.

Mobile Strategy, Growth & Lifecycle Engagement

- Helped transform the Cox App from account-management and web link-out experiences into a scalable mobile growth, engagement, commerce, lifecycle, and self-service platform, establishing it as Cox’s leading digital sales channel at approximately 30% of total sales.
- Defined and scaled a segmentation-driven engagement model leveraging behavioral signals (usage, billing patterns, service interactions) to deliver targeted in-app campaigns and offers; operationalized a Next Best Action–style engagement system using CRM segmentation, Adobe behavioral analytics, and contextual UI surfaces.
- Established a native-versus-link-out decision framework using customer intent, journey friction, conversion opportunity, usage volume, automation, technical complexity, reuse, and strategic channel value.
- Built reusable mobile capabilities across eligibility, pricing, catalog configuration, disclosures, consent, identity/SSO, authorization, order confirmation, deep links, analytics, and lifecycle states.
- App-originated traffic contributed 3,413 new Mobile lines in 2024 (+103% YoY); targeted App campaigns drove 2,509 lines (+111% YoY); App-originated orders reached 31.7% of total order volume.
- Established embedded targeting experiences generating approximately 450K interactions and 23,007 total CTA taps, including 6,356 ACP enrollments at a 45.71% conversion rate.

KAUSHIK KUBERANATHAN

[LinkedIn](#) | kaushikkuberanathan.github.io | kaushik.kuberanathan@gmail.com | Atlanta, GA | 404-493-0548

- Scaled engagement patterns across push notifications, in-app and embedded messaging, targeting, deep links, universal links, Message Center, and campaign analytics; improved App → Web journey success rates by 24% and reduced drop-offs by 30%.

Native Commerce, Conversion & Product Experiences

- Established native Mobile Data Plan Management, achieving conversion rates as high as 16.07% in pilot versus 3.74% after the experience returned to a web link-out — demonstrating the value of first-channel completion; 36% of data plan change orders originated from the App, a 25% YoY increase in first-channel completion.
- Built the native Add-Ons commerce platform, scaling to 797K+ visits, 16.5K+ orders, 87%+ automation, and an 11% lift in App campaign conversion; a related native in-app flow for add-ons and services reached 41% of add-on sales initiated in-app at a 94% automation rate.
- Reduced select five-step web purchase journeys to two-step native experiences by simplifying eligibility, product selection, pricing, consent, and confirmation; plan-change and pricing-comparison experiences boosted conversion by 16%+.
- Created metadata-driven catalog and eligibility controls — leveraging Channel Sales APIs and new catalog fields (#SellOnCoxAndroidApp / #SellOniOSApp) — that allowed business teams to determine product eligibility and native-vs-web treatment without requiring dedicated App releases for each new offer.
- Extended native plan management to support multi-line regressive pricing for Family Plans, driving approximately 20% higher adoption of Unlimited plans; 35% of multi-line accounts used the pricing comparison view.
- Led experiences across Device Payment Plans (24-month, 0% APR, internalized from third-party financing), Agreements & Discounts, Smartwatch Line Visibility, Residential Value Proposition, Universal Cart readiness, disclosures, and contextual deep linking.
- Increased campaign effectiveness through structured experimentation: +24% conversion lift via an A/B testing framework and a 2.5x improvement in click-through rate through targeted messaging.

Regulated Commerce, Trust & Customer Transparency

- Built systems improving customer decision readiness and trust, including pricing transparency (FCC “All-In” compliance), itemized checkout disclosures, consent and subscription clarity (FTC alignment), and financing visibility (Device Payment Plans) — protecting against FTC penalties of up to \$51,744 per violation.
- Delivered FTC Click-to-Cancel compliance (Phases 1 and 1.5), including consent-driven cancellation flows and persistent, consent-aware cancellation links across App and MyAccount; reduced repeat Care calls for cancellation status by 30%.
- Implemented the FCC Broadband Facts Label across eCommerce and account views, reducing escalations related to unclear plan terms by 22%; supported FCC Safe Connections Act requirements for account-separation privacy protections.
- Reduced billing disputes by 20% and support calls by approximately 15–30% across key journeys; introduced agreement lifecycle visibility (up to 3 years of history) so customers can track financial commitments and progression.
- Operationalized WCAG 2.2 AA accessibility patterns across commerce, consent, and service-management flows — standardizing reusable disclosure and confirmation components to reduce compliance exposure and remediation effort as the App scales.
- Established a dynamic content delivery system via AEM integration, enabling real-time updates of offers, imagery, and messaging across app surfaces (75% reduction in content deployment time).
- Developed config-driven architecture enabling rapid onboarding of new products (under 2 weeks versus a prior 8-week baseline) and reusable experience patterns across journeys.

Cox Business App — Enterprise Self-Service Platform

- Redesigned the Cox Business App’s role-based access control (RBAC 2.0) to support Admin/Manager/User hierarchies for SMB and multi-location customers, reducing access-related Care calls by 25% and increasing digital task completion by 40%.
- Built a deep-link framework connecting the Business App to CBMA web experiences (billing, voicemail, call forwarding, hunt groups), increasing App→Web success rates by 24% and reducing navigation drop-offs by 30%.
- Delivered native Call Forwarding management — the most-accessed CBMA feature at 24% of visits — and standardized an event-tracking taxonomy that improved analytics data accuracy by 90%.

Data, Experimentation & Product Craft

- Established KPI frameworks spanning conversion, containment, adoption, campaign attribution, customer behavior, feature usage, role segmentation, and journey completion.

KAUSHIK KUBERANATHAN

[LinkedIn](#) | kaushikkuberanathan.github.io | kaushik.kuberanathan@gmail.com | Atlanta, GA | 404-493-0548

- Used Adobe Analytics and campaign data to diagnose funnel friction, compare native and web performance, identify growth opportunities, and guide roadmap decisions; helped the Cox App reach 96.6% digital containment in 2025 while supporting more than 51M annual visits and 4.3M+ unique visitors.
- Developed Adobe dashboards tracking conversion, engagement by segment, and campaign performance, reducing manual reporting by 90%; led enterprise prioritization through ROI modeling ("Where to Invest the \$"), influencing capital allocation and a multi-year platform roadmap.
- Established App commerce governance and a Confluence/Jira-based intake framework spanning Legal review, UX, analytics, and launch readiness, improving intake-to-launch velocity by 40%.
- Created reusable discovery structures, epic templates, analytics taxonomies, decision records, and operating cadences; built "How to Own the App" playbooks and knowledge-transfer mechanisms.

AI-Enabled Product Discovery & Execution

- Champion practical AI-assisted product workflows across research synthesis, competitive analysis, meeting intelligence, customer discovery, requirements refinement, documentation, customer messaging, and executive storytelling.
- Reduced research and documentation preparation effort by more than 60% while improving iteration speed, decision clarity, and stakeholder alignment.
- Use modern AI development tools to prototype working software and deepen hands-on understanding of product architecture, UX, data models, testing, and delivery.

Team Development & Operating Model Leadership

- Operate at director-level scope by setting portfolio direction, influencing roadmap decisions, and developing product talent across matrixed teams; mentor product managers, analysts, interns, and cross-functional partners.
- Led structured knowledge transfer during the Residential-to-Cox Business App ownership transition, creating "How to" playbooks, cross-functional partner maps, intake models, and operating cadences.
- Supported hiring panels for Digital Product roles, evaluating candidates for product mindset, customer empathy, collaboration, and long-term culture fit.

Selected Outcomes

- +32% YoY app eCommerce revenue growth | 4× order volume increase | ~96% digital containment | App established as Cox's leading digital sales channel at approximately 30% of total sales.
- Recognition: 2024 Winners Circle Award for outstanding digital revenue contribution and customer experience leadership.

Parallel Product Experience

Founder & Product Builder | Youth Sports Technology | Dugout Lineup | Atlanta, GA

2025–Present

- Conceived and built a mobile-first youth sports product from firsthand coaching experience, addressing lineup generation, defensive rotations, player participation, and game-day decision support.
- Own end-to-end product development across customer discovery, workflow design, roadmap prioritization, UX, data modeling, testing, and release planning.
- Use AI-assisted development to accelerate prototyping, requirements, testing, and iteration while applying enterprise product principles around reusable systems, data integrity, and instrumentation.

Youth Baseball Volunteer Coach | Forsyth County Recreation | Atlanta, GA

2025–Present

- Coach youth baseball and work directly with athletes, parents, coaches, scorekeepers, and volunteers, providing continuous firsthand insight into the workflows Dugout Lineup is designed to solve.

Enterprise Program Leadership

Senior Technical Product Owner / Product Manager | Cox Automotive | Atlanta, GA

2021–2022

Led modernization across Manheim shared services, title operations, and enterprise back-office platforms spanning API-first architecture, cloud migration, and UX modernization across 70+ field locations.

KAUSHIK KUBERANATHAN

SAFe POPM® | PMI-ACP® | CSPO® | CSM® | Pendo: AI for Product Management | Product-Led Growth
[LinkedIn](#) | [kaushikkuberanathan.github.io](https://github.com/kaushikkuberanathan) | kaushik.kuberanathan@gmail.com | Atlanta, GA | 404-493-0548

- Led modernization of legacy title workflows into an API-first, event-driven microservices platform across multiple Cox Automotive brands, introducing real-time eventing and timestamped audit trails; reduced title-processing turnaround time by approximately 75% and eliminated recurring lost-title incidents.
- Defined and published the Seller Titles API as a first-class external capability at developer.manheim.com, leading technical onboarding for enterprise partners including Ford and Carvana and reducing custom integration effort for large sellers.
- Directed AWS cloud migration (EC2, EKS, S3) with observability via CloudWatch and New Relic, improving throughput, resiliency, and release velocity for high-volume workflows.
- Led AngularJS-to-React UX modernization with reusable component libraries and design tokens, reducing UI defects by approximately 40% and improving accessibility alignment (WCAG 2.1 AA).
- Authored data-backed business cases securing multi-year modernization funding; mentored Product Owners and Analysts on Agile delivery practices and standardized intake/backlog hygiene.

Senior Agile Project Manager | Equifax Inc. | Atlanta, GA

2020–2021

Directed a \$35M migration of Equifax's Risk Decisioning Platform from on-premises infrastructure to a configurable cloud SaaS model, leading global onshore/offshore delivery teams.

- Led global Agile delivery teams (Dev, QA, SRE, SA, BA) across Atlanta, Toronto, and India through a multi-tenant cloud re-architecture, migrating 900+ enterprise B2B customers across the Americas with zero critical defects and 100% SLA adherence during cutover.
- Reduced feature delivery time from 6–8 months to 4–6 weeks through configuration-driven rollout; implemented Jenkins-based CI/CD pipelines that reduced deployment duration by 70% and increased release frequency from quarterly to bi-weekly while cutting production defects by 45%.
- Established delivery governance scorecards and executive steering reporting across 10+ global delivery streams, reducing governance reporting turnaround from 5 days to under 1 day.
- Maintained SOC-2 and ISO 27001 compliance throughout the transition while coordinating change management, training, and release-readiness reviews.

Senior Product Owner / Principal Business Analyst | Cox Automotive | Atlanta, GA

2018–2020

Owned end-to-end delivery of digital modernization, automation, and self-service initiatives across auctions, logistics, and back-office operations.

- Designed and delivered an Android-based badge-printing kiosk application for auction and event registration, generating \$1.2M+ in annual cost savings and reducing average check-in time by more than 70%.
- Led a web self-service and digital adoption program — using VOC-informed prioritization and A/B testing — that increased digital self-service utilization by 40% and reduced call-center volume for transactional requests.

Led AngularJS-to-React front-end modernization with reusable component libraries, reducing front-end maintenance effort by 35% and increasing usability and feature adoption by 40%.

- Built an automated API and database diagnostic/troubleshooting platform enabling self-service remediation for common failures, reducing operational incident volume by 86.6%.
- Embedded Voice-of-Customer discovery, competitive benchmarking, and journey mapping into roadmap planning, prioritizing features that drove 40% higher digital adoption; established a closed-loop field/product feedback model that cut issue triage and resolution time by more than 50%.

Senior QA Product Lead / Senior Product Delivery Lead (QA) | Cox Enterprises | Atlanta, GA

2015–2018

Owned quality strategy and execution across a multi-year Oracle ERP Financials implementation spanning 80+ auction sites.

- Designed and executed enterprise QA governance for the Oracle ERP Financials rollout (GL, AP, AR, Procurement) across 80+ auction sites, achieving a go-live with zero critical post-launch defects.
- Built Jenkins-based test data automation integrated with Oracle EBS, reducing test data preparation from 8 hours to 12 minutes and shortening regression testing cycles by 40% (10 days to 6 days).
- Standardized defect severity/priority governance and daily cross-functional triage, reducing defect resolution time by 87.5%.
- Built quality and go-live readiness dashboards giving leadership real-time visibility into release readiness across systems and sites; mentored QA leads across regions and authored reusable QA playbooks adopted enterprise-wide.

[LinkedIn](#) | kaushikkuberanathan.github.io | kaushik.kuberanathan@gmail.com | Atlanta, GA | 404-493-0548

Business Systems Analyst & QA Advisory | Cox Enterprises | Atlanta, GA

2011–2014

Supported enterprise procurement, finance, and back-office platforms built on Oracle E-Business Suite (EBS), including work for InComm Inc.

- Modernized enterprise procurement via Oracle iProcurement Punchout — automated approval hierarchies and standardized supplier data exchange — reducing requisition closeout time by 80%.
- Established enterprise QA and test-strategy frameworks (integration, regression, UAT) with risk-based test planning, increasing test coverage by 30% across ERP and integration projects.
- Built SQL-based data-integrity and reconciliation validation across Oracle modules, improving audit readiness and reducing manual validation effort.
- Led Oracle ERP month-end close automation for InComm Inc., reducing close time from 6 hours to 90 minutes; delivered NACHA-compliant ACH banking integration achieving 100% compliance in its first audit cycle and cutting file rejections by 60%.

Education

- M.S., Industrial & Systems Engineering – University of Florida (Minor: Supply Chain Management)
- B.E., Electronics & Communication Engineering – Anna University
